Let’s Talk about Drugs
Questions we hear from parents...

* What kind of drug experiences might my child face?
* What’s the best way to talk to my child about drugs?
* What can I do to make my child less vulnerable to developing problems with drugs?
Drug use occurs on a continuum

- **Experimental**
  - Motivated by curiosity or a desire to experience new feelings or moods

- **Social**
  - Use on specific social occasions

- **Situational**
  - Pattern associated with specific situations

- **Intense**
  - Higher doses and increased frequency

- **Compulsive**
  - Persistent and frequent high doses producing psychological or physiological dependence
How do we make sense of this data?

How do the reasons relate to social and physical environmental conditions?

How does the context influence the results of use?

People use:
- to feel good
- to feel better
- to do better
- to explore
Most youth use a variety of psychoactive substances.
* E.g. 72% of 18 year olds have tried alcohol
* Almost all use caffeine
* Many will try cannabis and some will experiment with other drugs
* For the most part use has declined over the last decade

Reasons vary.
* Fun (60% males/69% females)
* Friends Were Using (33%)
* Experimentation (28%)
* To deal with stress & other emotions (21%)
* 3% of males 4% females report feeling pressured to use

* Source: AHS 2013
Decreasing rates of substance use

Ever tried different substances

- Alcohol
- Marijuana
- Tobacco

- Alcohol:
  - 2003: 65%
  - 2008: 64%
  - 2013: 53%

- Marijuana:
  - 2003: 43%
  - 2008: 40%
  - 2013: 30%

- Tobacco:
  - 2003: 35%
  - 2008: 30%
  - 2013: 24%
## Using other substances

What do opioid deaths indicate about the scope of the crisis?

For every 1 death there are...

- 10 treatment admissions for abuse
- 32 emergency dept visits for misuse or abuse
- 130 people who abuse or are dependent
- 825 nonmedical users
Population distribution of substance use, problems, and need for services (BC, 2009-10)

Severity

Highly acute and chronic problems, including co-occurring mental and substance use disorders

Non-problematic use, abstinence

78.0%

9.2%

8.4%

3.6%

0.3%

What’s the risk? It depends ...

* More drug equals more risk
* Younger age equals more risk
* Places, times and activities influence risk
* Underlying factors influence risk
* Some drugs are more dangerous than others

YOU MAY NOT SEE IT, BUT YOU CAN STILL TALK ABOUT IT.

Visit AlcoholSenseBC.ca and start talking with your kids about alcohol to help them make healthy choices.

THE GOOD SAMARITAN
DRUG OVERDOSE ACT
IS NOW LAW

THE LAW SAYS:
If you are at the scene of an overdose and you or someone else calls 911 to get medical assistance, you are not to be charged with simple possession (possession for your own personal use) of an illegal substance.

You are also not to be charged for breach of probation or parole relating to simple drug possession.

IF YOU SUSPECT AN OVERDOSE,
CALL 911
CALLING 911 SAVES LIVES

After calling 911, give breaths and naloxone if you have it.
Stay with the person until help arrives.

July 28, 2017
**THE OPIOID OVERDOSE EMERGENCY**

**THE SITUATION:**

- **The number of overdoses and overdose deaths has been increasing since 2012.**
- In 2016 alone, there were over 930 unintentional, illicit drug overdose deaths, which is more than ever before.

**Who is at risk?**

- Of people who died of overdose in 2016...
  - 4/5 were male
  - 2/5 were using drugs alone
  - More than 1/2 were using drugs in a private residence

- Of people who were brought to the emergency department for an overdose in 2016...
  - 17/20 cases, 911 was not called
  - 4/5 were between age 20-49

**Overdoses and overdose deaths are increasing because of fentanyl.**

- People don’t know what or how much is in their drugs.
- Many people who test positive for fentanyl don’t know that they are taking it.
- Since fentanyl was introduced, more people have been having repeat overdoses.

- Fentanyl was found in 3/5 of overdose deaths in 2016.
- There are different types of fentanyl, such as furanyl fentanyl and carfentanil, which vary in toxicity.

- Fentanyl has been found in:
  - Pills, as fakes oxy or other club drugs
  - Powder, as heroin or fent
  - Powder mixed into other drugs (crystal meth, cocaine, etc.)

**A public health emergency was declared on April 14, 2016.**

This lets the province collect more information on overdoses so that they know where most help is needed.
Stigma

Criminalization
* Contributes to isolation, keeps the issue hidden.
* Not likely to initiate a conversation about their use.

Language Matters
* Stigmatizing language discredits people who use drugs and can result in discrimination.
* Stigmatization contributes to isolation and means people will be less likely to access services.
Naloxone and other Resources

* Toward the Heart
  * Information
  * Videos
  * E-learning – complete naloxone training online
  * Finder (naloxone, OPS, safer sex/drug supplies)
    www.towardtheheart.com
  * Public Health Units
  * Pharmacies are starting to carry free Naloxone kits
... most young people who use alcohol and drugs during their teen years do not develop long term problematic substance use...

Adolescent Health Survey 2013
What research shows and what we know about the war on drugs

“Rat Park” video
We’re in this together!
Some Guiding Principals

* Be available and try to listen more, talk less
* How stirred up am I? Is now the best time….
* Ask questions. “what do you think….how do you want to handle this?”
* How can you be a resource to your child around this topic?
* Be clear about where you stand on the issue
* If you find yourself getting reactive, don’t be hard on yourself… there’s always a next time to work at this!
* The goal is to open up communication as a way of lowering risk
* more connection and relationship = lower risk
* Tone down the intensity!
Less helpful ...

* Ordering – “you must, you have to ..”
* Advising – “Why don’t you ... it would be best if ..”
* Warning – “You’d better, if you don’t ...”
* Lecturing – “Do you realize, the facts are ...”
* Diagnosing – “What you need is, what’s wrong with you is ...”
* Moralizing – “You should, you ought to ...”
* Judging – “You are wrong, you are acting stupidly ...”
* Interrogating – “Why ... who ... how...”
My teen has started smoking pot and hanging out with friends who are smoking pot and drinking regularly. What’s the better way for me to handle this?
Some questions for discussion...

* What do you notice about times when you are able to have the most effective conversations with your child about difficult topics, e.g., substance use?

* What are you bringing to the conversation that seems to work well?
When you are anxious and afraid for your child’s safety, what do you notice about how you interact or relate to your child?
Minimizing Risk/Maximizing Resiliency – what helps?

- Enhancing belonging and connectedness
- Supportive relationships
- Building agency and building a sense of purpose
- Building critical thinking and social skills
- Nurturing recognition of fallibility
- Opportunities for pro-social (and fun!) activities

Open conversations create trust, reduce fear and make it possible for us to learn from one another.
Discovery Youth and Family Substance Use Services

Free, Confidential, Voluntary Counseling Services for:

**Youth (13 -19)** who use or are impacted by someone’s substance use

**Parents & Caregivers** who are supporting a youth around substance use concerns

**Other community members** that are engaged in supporting youth & families around substance use issues.
